PROFILE INFO

Motivated B.Tech CSE (Cyber Security) first-year student with hands-on experience in Linux environments, Python, SQL, and Flutter-based application development. Actively building real-world projects in accessibility tech and government-scale data platforms. Seeking internship opportunities in software development / cybersecurity / backend systems to apply skills and grow through industry exposure.

PROJECTS

PHISHSHIELD_GUARD

A cybersecurity application that detects phishing emails, messages, and links while validating email breach exposure and phone number scam reports to prevent fraud.

TOURSPHERE (SIH2025)

A prototype of travel planning and improved user experience platform for acquiring the tourist data across Kerela for the infrastructure planning.

LAUNCHLENS

An automated web application auditing tool that detects security flaws, maps vulnerability risks, analyzes functional behavior, and generates structured pitch scripts and walkthroughs for product demos.

NUTRISAFEAI

An AI-driven nutrition and food safety application that analyzes ingredients, dietary preferences, and health conditions to recommend safe and personalized meals with their recipes.

VISIONAI (IN PROGRESS)

A prototype for visually impaired people to walk smoothly and confidently using the voice commands given by the app of any obstacles coming up and guiding them accurately.

STRENGHTS

- **Strong willingness to learn and upskill**
- **Hands-on, curiosity-driven problem solver**
- **Adaptable to new technologies and work environments**
